

SAKSHI SHARMA

AI Engineer (LLM Applications) | Backend Development & Workflow Automation

+91 9690706019 | sakshi00273@gmail.com | New Delhi, India | [GitHub](#) | [LinkedIn](#)

SUMMARY

B.Tech Computer Science graduate from Birla Institute of Technology, Mesra with hands-on experience building multi-LLM agentic pipelines, production-grade automation infrastructure, and end-to-end backend systems. Built a multi-model consensus pipeline (GPT-4.1-mini, Claude, DeepSeek, Grok) for automated classification, and an autonomous lead-qualification pipeline that researches, scores, and reaches out to leads end-to-end using LLMs. Skilled in FastAPI, n8n orchestration, and integrating LLMs into backend-driven automation workflows. Experienced across the full SDLC, from requirement gathering and system design to deployment and documentation, in fast-paced, cross-functional teams.

EXPERIENCE

Software Developer (Contract)

04/2026 - Present

OneReach.ai, CMO Office | Agentic AI, FastAPI, n8n, PostgreSQL, React

Engaged as a fractional developer to build agentic automation systems supporting marketing and go-to-market operations, working directly with the CMO's office to translate growth workflows into production-grade pipelines.

- Built an end-to-end agentic pipeline orchestrating 5 services (Google Sheets, Gemini AI, FastAPI, Postgres, Gmail) that enriches raw leads with AI-powered research, scores relevance, and auto-sends personalized outreach to qualified leads.
- Designed a FastAPI backend as the single API layer to Postgres, enforcing validation, upsert logic, and status-driven pipeline progression across all stages
- Implemented dedup via sheet write-back to prevent duplicate outreach, and score-threshold gating (70+) to ensure only high-intent leads receive AI-drafted emails
- Built a React dashboard (Vite, Tailwind, Recharts) for real-time pipeline monitoring, including funnel overview, stage visualization, and a filterable lead table with status badges

Software Engineering Intern (Process Automation)

01/2026 - 04/2026

mPass Lobby Management Pvt. Ltd

- Built end-to-end n8n automation workflows (self-hosted via Docker) for multi-country financial data pipelines spanning India, USA, and South Korea, covering sectors, IPO tracking, and corporate actions
- Designed a multi-LLM agentic classification pipeline (GPT-4.1-mini, Claude, DeepSeek, Grok) with a majority-vote consensus mechanism, improving classification reliability over single-model approaches
- Engineered scalable data pipelines integrating REST APIs, webhooks, and Google Sheets/Drive/Gmail APIs, using Google Sheets as an inter-stage data bus for pipeline orchestration
- Implemented a centralized error handler across all n8n workflows, standardizing failure logging and alerting for production reliability
- Eliminated ~91% of manual operational tasks through automation, measured against pre-automation baselines

PROJECTS

Load Demand Forecasting Using LSTM

06/2025 - 07/2025

TATA Power DDL, New Delhi (Data Science) | Python, TensorFlow, Pandas, Scikit-learn

- Processed 14 months of 15-minute electricity demand and weather data, performing preprocessing, stationarity testing, correlation-based feature selection, and exploratory time-series analysis
- Engineered lag and rolling statistical features to capture short-term dependencies, daily seasonality, and volatility, with leakage-safe feature construction
- Developed an LSTM-based time-series regression model using MinMax scaling, sequential 10-timestep inputs, Adam optimization, and MSE loss to forecast short-term electricity demand
- Achieved 3.40% test MAPE, validated using actual-vs-predicted plots and error-distribution analysis

Neural Mail Email Classification System

04/2025 - 05/2025

- Developed an NLP-based email classification pipeline using Python, scikit-learn, and TF-IDF vectorization to classify incoming messages by textual patterns
- Trained and evaluated Multinomial Naive Bayes and Linear SVM classifiers on 9,971 cleaned email samples using accuracy, precision, recall, F1-score, and confusion matrix; Linear SVM achieved 97.89% accuracy and 0.988 precision
- Integrated the trained model into an email filtering pipeline for automated spam vs. legitimate classification

SKILLS

Languages: HTML, CSS, Python, MySQL

LLM & Applied AI: RAG (Chunking, Embeddings, Semantic Search, Retrieval Evaluation), Prompt Engineering, LLM-based Classification & Scoring, LangChain, LangGraph, Multi-Agent Systems, Tool Use & Function Calling, OpenAI, Anthropic Claude, Google Gemini, Grok

Classical ML: LSTM, SVM, Logistic Regression, Feature Engineering, NLP

Frameworks & Libraries: FastAPI, TensorFlow, Pandas, NumPy, Scikit-learn

Automation & Orchestration: n8n, REST APIs, Webhooks, Google Sheets/Drive/Gmail APIs

Databases: PostgreSQL, Neon, pgvector (vector search)

Developer Tools: Git, GitHub, Docker, Linux, VS Code, Claude Code

EDUCATION

B.Tech, Computer Science & Engineering

2022 - 2026

Birla Institute of Technology, Mesra | CGPA: 8.01/10.00

St. Fidelis Sr. Sec. School, Aligarh | CBSE Class XII: 94.4% | Class X: 96%

RESEARCH & LEADERSHIP

- Presented review papers at ICTMRI 2023 and RTST-ISRO 2024; Head Coordinator (Alumni Relations) and Student Placement Coordinator at BIT Mesra, leading teams of 25+ and coordinating placement drives with top recruiters
